TEXAS A&M IT
DATA CENTER SERVICES

DEPENDABLE
FLEXIBLE
SECURE
Let us help you design your optimal data space, or move your own equipment into our highly reliable and secure data centers.

The new Aggie Cloud is a self-service model with VMware powered virtual machines. Request a new host in minutes, and decommission resources when they’re no longer needed. The control is in your hands.

Highly sensitive research or other important data is protected by our Secure Enclave. This service guarantees Texas A&M is compliant with DFARS and new, more stringent, federal regulations.

Our certified professionals, available 24 hours a day, can offer expert advice on the right solution to fit your needs.

High-availability access to your data whenever and wherever you need it.

Controlled entry, 24 hour monitoring, video surveillance and an armed security guard at our West Campus location.

Two, high-speed fiber network routes provide high-speed connection to campus buildings and the world.

From data in transit over the network, to data at rest, robust security tools are in place to scan for vulnerabilities and attacks.

Reliable and redundant power

Flexible services designed to fit your needs.

Build-to-suit and co-location services

Data protection

Safe and secure

Professional service

Robust network

WHY CHOOSE TEXAS A&M IT DATA CENTER SERVICES?

+ **FOCUS ON YOUR MISSION.**
  Let Texas A&M IT keep your servers running and your data secure, and allow your IT staff to focus on supporting your employees and the mission of your organization.

+ **FREE UP VALUABLE RESOURCES.**
  Reallocate your equipment to our data center for no charge,* saving valuable space and reducing energy costs.

+ **UPGRADE YOUR EXPERIENCE.**
  Texas A&M IT Data Center Services are highly-resilient, robust and built for the future. The Aggie Cloud is powered by best-of-class servers, storage and software.

*No-charge co-location provided for Part 02, non-auxiliary units for FY18.

Designed for what you need most.

**SECURE**

Designed from the ground up to integrate security into every layer. You can have confidence that physical and data security is our top priority. Whether you’re working on highly-confidential DFARS research, or with sensitive student information, we have the protection you need.

**FLEXIBLE**

Flexible services include co-location space for your servers, virtual machines that can be activated in minutes and build-to-suit solutions. Let us help you find the solution customized to meet your needs.

**DEPENDABLE**

High-availability and resilient systems from the network to the generators, the electric subsystems to the plugs. Knowledgeable IT professionals, certified in cutting-edge technology, offering expert advice 24 hours a day.
